

LaserTouchOne™
pain relief in the palm of your hand

**In common language,
the LaserTouchOne™
has been cleared for
use to relieve:**

- Back Pain
- Tendinitis
- Hip, Knee, and Shoulder Pain
- Muscle Tension
- Sprains
- Post-Surgical Pain
- Post-Traumatic Pain
- and more...

*As Medical Director,
Okky Oei, MD brings a
lifetime of experience in
assessing, researching and
treating chronic and acute
pain to his work with
Renewal Technologies and
the LaserTouchOne™.*

LaserTouchOne™ Pain Relief in the Palm of Your Hand

The Product

The LaserTouchOne™ is a breakthrough pain relief device cleared by the Food and Drug Administration (FDA) for over-the-counter sale – and the only product on the market today that combines two proven therapies: low-level laser and micro-current electrical stimulation. Research has shown that, in combination, these two therapies – each evidence-based and scientifically proven – treat the source of pain (not the symptoms) and promote the body's natural healing process at the cellular level.

Developed by a physician and expert in pain and pain relief treatments and previously available only under a doctor's care, the LaserTouchOne pain relief solution is now available for personal use without a prescription.

The FDA's summary of use states: this combination of low-level laser and micro-current electrical stimulation provides symptomatic relief of chronic, intractable pain, and is indicated for adjunctive treatment of post-surgical and post-traumatic acute pain and for adjunctive use in providing temporary relief of minor chronic neck and shoulder pain of musculoskeletal origin.

There are three hallmarks of the LaserTouchOne that define it as a significant breakthrough in the treatment of pain:

1. subsequent studies and clinical trials have reproduced consistent results ;
2. pain sufferers report rapid results – oftentimes with one or two, two-minute treatments; and
3. study results point to cumulative benefits of repeated use – related to the intensity or significance of the pain as well as improved function.

Despite the fact that the majority of the U.S. population looks healthy, statistics tell a different story: [The American Academy of Pain Management \(AAPM\)](#) estimates that **1 in 3 Americans suffer from chronic pain**. This could be an illness like cancer or rheumatoid arthritis, or a condition such as arthritis, migraine headaches or back pain from a car accident. Put another way: More than 75 million Americans – more than those diagnosed with diabetes, heart disease and cancer combined – live with chronic pain that makes simple tasks like lifting a child, sitting at their workstation, or swinging a golf club nearly impossible.

Clinical studies commissioned to secure FDA clearance showed that the LaserTouchOne™ is 93% effective in decreasing pain in study patients who received the full treatment regimen and was more effective than treatment with either the TENS unit or cold laser device alone.

In a marketplace filled with prescription drugs and over-the-counter medications, conventional medical treatments, alternative therapies, and invasive surgical procedures, the LaserTouchOne truly stands alone as a safe, effective, painless, and easy-to-use personal pain relief solution. The bottom line impact of this extraordinary product on one's quality of life and ability to resume an active and healthier lifestyle is significant.

Now, for the first time ever, the LaserTouchOne is available at www.LaserTouchOne.com and through our growing network of local distributors.

Key Features:

- Safe and easy to use
- Ergonomic, handheld design
- Portable for easy transport (it's about the size of an electric toothbrush)
- Combines a low-level laser and micro-current electrical stimulation
- No cumbersome wires
- Can be used multiple times per day in two-minute treatment sessions
- 30-day money-back guarantee

Key Benefits:

- Treatment promotes the body's natural repair and healing processes at the cellular level
- Proven to be 93% effective in relieving pain
- Provides a safe alternative to medication as well as surgery and other invasive procedures
- Easy for consumers' self-use
- Available without a prescription
- A qualified medical device expense
- Comfortable and painless
- Overall improved quality of life!

The Power behind the Product: Science

The LaserTouchOne combines science, medicine and technology in creating a powerful new alternative for pain relief.

Low-Level Laser Therapy, also referred to as cold laser, is a method of treatment using a single diode laser for delivery of low level (cold) laser therapy. It is a well-established therapy for pain relief and rehabilitation of numerous injuries. The laser light penetrates tissue where it is absorbed by cells and effectively stimulates healing and rapid pain relief.

Micro-Current Electrical Stimulation stimulates the cells in affected areas. The micro-current effectively stimulates the production of ATP (energy molecule) as well as facilitates the transfer of information between the source of pain and brain, allowing the body to repair and heal. As a result, local physiological changes become evident, namely muscle relaxation, improved range of motion, and improved circulation.

The synergy of the dual treatment modalities delivered via a hand-held instrument and available without a prescription is a true alternative to current pain management techniques that include medications, surgery and other invasive procedures and will forever change the way the millions who suffer from chronic and acute pain view their treatment options – knowing that the answer to a pain-free future can be in the palm of their hand.

The Renewal Technologies Promise

Renewal Technologies is a mission-driven company committed to bringing the new and revolutionary technology of the LaserTouchOne to the tens of millions of Americans who live with debilitating chronic and acute pain. Our team of representatives and distributors, often accompanied by Renewal Technologies' Medical Director Okky Oei, MD,

will visit cities across the country to help educate people on the power of the LaserTouchOne.

The entire Renewal Technologies team is committed to an enhanced quality of life for pain sufferers... the rich, active life that freedom from pain can mean for them and their families.
